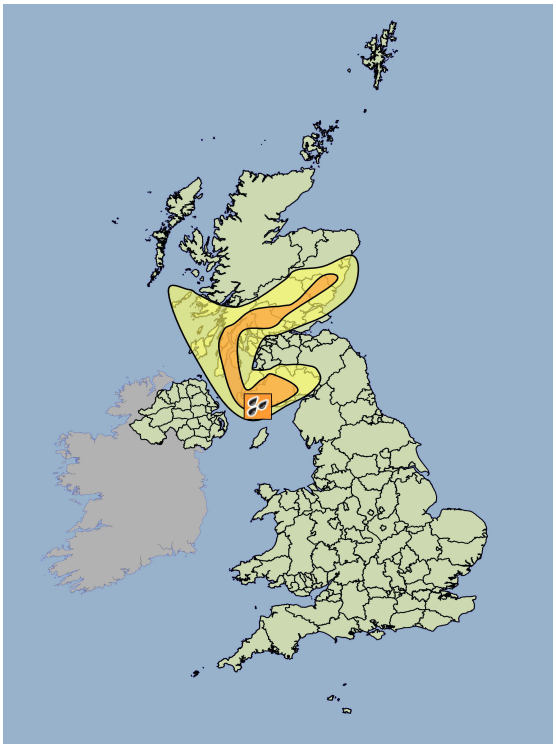
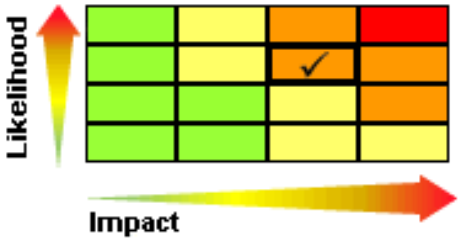
National Severe Weather Warning Service





Chief Forecasters Assessment
A deepening area of low pressure will move northeast towards Iceland with an active frontal system moving east across the UK during Thursday and Friday. The rain will be persistent and heavy at times, with 25-40 mm widely within the warning area. The largest rainfall totals will be over south facing hills across Dumfries and Galloway, and the southern Highlands from Argyll across to Angus, with 50-75 mm likely, and isolated peaks of 100 mm in the more mountainous areas. Some shorter spells of heavy rain are also expected at lower levels increasing the surface water flood risk.

The Met Office have issued an **Amber Warning** of **Rain**

Valid from **13:00 on Thu, 06th Nov 2014** until **18:00 on Fri, 07th Nov 2014**

Outbreaks of rain will continue to affect Scotland for the rest of Thursday, continuing overnight and well into Friday. This will be heaviest and most persistent over southwest Scotland, and the southern Highlands from Argyll across to Angus. The rain will gradually clear from the west later on Friday.

The public should be prepared for the risk of localised flooding and potential disruption to transport, particularly within the Amber area.

This is an update to the warning issued on Wednesday, expanding the yellow warning area into southern Aberdeenshire, and to include an Amber area for parts of the southwest and the southern Highlands where there is a greater likelihood of impacts due to the heavy rain.
